

Scheme for Improvement of Crops Statistics

The objective of this component is to improve the quality of statistics of area and production of crops through supervision and monitoring. Under this component, a sample check of area enumeration and crop cutting experiments of 10,000 villages and approximately 31,000 experiments at harvest stage are undertaken. This component is being implemented in all TRS States and the Union Territory of Pondicherry. The performance of the implementation of this component also is being closely monitored through Quarterly and Seasonal progress Reports.
